

Rampiva Automate for Microsoft Purview

Control eDiscovery in Microsoft 365 with Rampiva Automate for Microsoft Purview.

The only independent platform with integrations into Azure, Nuix, Relativity and Reveal-Brainspace, Rampiva Automate for Microsoft Purview is a powerful way to accelerate data requests from Microsoft 365. Stop watching the progress bar – focus on case strategy, project management, and educating stakeholders.

24-Hour Job Queue

Power a 24-hour “assembly line” for managing collections without having to monitor the progress of review sets, export sets, and downloads. Leverage a shared interface, error alerts, and in-platform notifications so your team can better manage collection obligations.

Purview Export

Drive the creation of export sets and the download of items from Microsoft Purview to an Azure storage account or to your local infrastructure. Free your team from having to check the status of the collection while eliminating latency between each step.

Export Metadata

Convert Purview exports into Nuix Logical Image files that can be loaded into Nuix Workstation with the family relationships and metadata from Microsoft 365, for deduplication and analysis when handling PSTs, Teams communications, SharePoint sites and other data sources.

Azure Administration

Run jobs on your local infrastructure or in Azure on a single- or multi-server configuration and automatically allocate compute resources just-in-time to optimize cost and project completion times. Stage exports in Azure before moving them to your service provider or to local infrastructure.

Authentication and Access Controls

Log in to Rampiva Automate using a Microsoft account and restrict resource access with granular security policies – ensuring control and privacy.

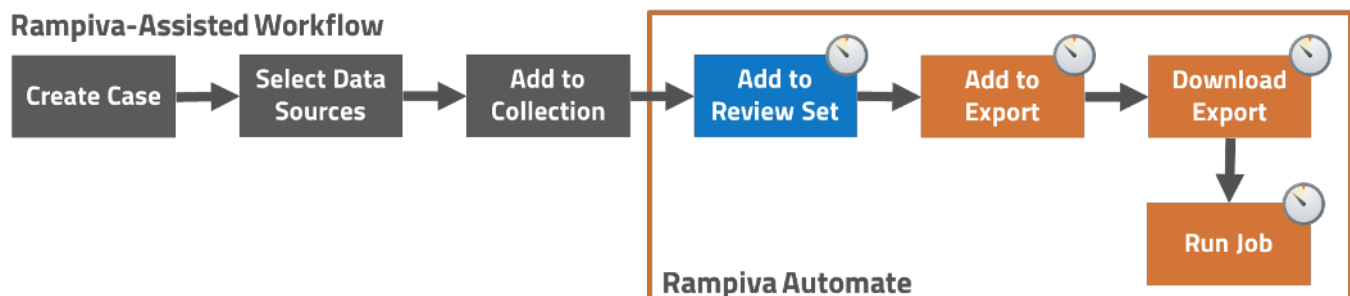

Native PowerShell Scripting

Run external applications in a unified workflow with Rampiva’s native PowerShell function.

Microsoft PowerBI

Understand activity, performance, and productivity across all clients, matters and cases – from legal hold notifications through review!

Rampiva-Assisted Workflow

Who is “Automate for Microsoft Purview” For

Enterprises who are looking to automate the collection of data from Microsoft 365 with more control and fewer resources. This solution reduces the time required to perform collections, increases the robustness and auditing of collections, and further automates the rest of the eDiscovery process at scale, including processing and review.

Implementation

Test drive Automate for Microsoft Purview with a free Community-edition license, by following the guides on our Community portal <https://community.rampiva.com/t/community-edition-getting-started/78>. This version is lightweight and can be upgraded to include the full integration capabilities to Nuix, Relativity, and Reveal-Brainspace.

About Rampiva

Rampiva is a global software provider focused on data automation, system administration, and analytics. Rampiva’s solutions are a force multiplier and accelerator for eDiscovery and forensics teams around the world, including government regulatory agencies, top advisory and AmLaw 100 firms, and prominent legal service and digital forensics vendors.
