Rampiva Automate – Premium Edition

World-class data processing teams deserve automation that rewards their insights, expertise, agility, client relationships and innovation. Push past efficiency to deliver new offerings and service models by leveraging Rampiva Automate – Premium Edition. Empower clients, achieve massive scalability, and connect outside of Nuix to eclipse expectations.

Data processing just got interesting.

Build on Rampiva Automate – Business Edition by adding:

Direct-to-Rampiva Upload

Enable end-clients and internal teams to upload large volumes of data directly to Rampiva for processing without having to deploy a dedicated file transfer solution.

Multi-Region Deployments

Optimize deployments and data transfers with geo-local access.

Upload-Triggered Processing

Automatically start processing jobs for data uploaded by end-clients, 24 hours a day.

End-Client Access

Provide a controlled access for end-clients to Workflows, Resources and Jobs, so that end-client users can only access their projects and data when submitting and monitoring jobs.

Webhooks

Trigger activity outside of Nuix and Rampiva by leveraging low-code integrations to other project management, eBilling and analytics tools, or use Microsoft Flow to make data processing an integral part of your business processes.

API Keys

Control Rampiva from outside platforms and scripts using the REST API, and manage access robustly using API Keys.

Lightweight Workflows

Use lightweight Rampiva-native workflows for administrative jobs or controlling third-party applications, without locking up hardware resources or Nuix licenses.

Conditional Scheduling

Set recurring jobs to run in the future, or make jobs conditional on other activity to maximize productivity.

Interface Branding

Adjust the Rampiva Scheduler interface to ensure consistent branding for end-clients.

Cloud Resource Management

Run jobs in Azure or AWS, on a single- or multi-server configuration and automatically allocate compute resources just-in-time to optimize cost and project completion times.

Large Job Scaling

Distribute single-large jobs over multiple servers using Rampiva-managed remote workers and release remote servers when not needed to optimize the overall processing environment's efficiency.

Who is "Premium Edition" right for?

Rampiva Automate – Premium Edition is an advanced product that is best used by experts who need the best in resource optimization, quality control, system integration and risk mitigation. This includes eDiscovery and digital forensics teams that are looking beyond scripts and basic automation or departments that are supporting advanced use cases, like information governance, DSARs or compliance monitoring. Premium Edition is also the best product for anyone building a cloud-first data processing environment.

Implementation

All Rampiva Automate Editions are designed to be lightweight and easy to install. They do not require new hardware beyond the environment that supports your Nuix Environment. To learn more about training or advanced implementation packages, click here:

About Rampiva

Rampiva is a global software provider focused on data automation, system administration and analytics. Established in 2016, Rampiva clients run over 1,100 Nuix Workers in 8 different countries, processing more than 1 PB of data for eDiscovery, digital investigations, and other projects each year.
